

LiveData Procedure Suite Manager™

Hospital service lines like cardiology, endoscopy, pulmonology, and radiology are key drivers of procedural volume. However, managing these rooms can be complex and time-consuming, requiring careful coordination of staff, anesthesia services, equipment, and supplies. LiveData Procedure Suite Manager helps hospital service lines streamline processes, increase room utilization, reduce cancelations, mitigate the impact of staff shortages, improve communications, and enhance patient safety.

LiveData Procedure Suite Manager Includes:

LiveData Patient Flow™ and LiveData Family Waiting Board™ with Procedure Mobile Messenger

Patient Flow adds real-time patient status updates to your workflows so procedure teams can follow patients as they move through your pre-procedure processes. The Family Waiting Board closes the information gap between the procedure team and waiting family members through a HIPAA-compliant wall-mounted monitor in the waiting area. Procedure Mobile Messenger text messages also keep family members up-to-date with their loved one's progress. In addition, Procedure Mobile Messenger sends a nightly text message to remind clinicians of their first case start time for the next day.

LiveData Procedure-Schedule Board™

Procedure-Schedule Board replaces whiteboards. Throughout the procedure suite environment, wall-mounted displays provide a dynamic, real-time view of the day's procedure caseload. Procedure-Schedule Board notifies charge nurses and procedure suite staff of schedule changes without phone calls or visits to the procedure suite. The solution automatically adjusts case start and end times based on real-time case workflow monitoring. Charge nurses and procedure suite leaders can reschedule or cancel cases in real-time, as well as make room assignment changes as the day unfolds.

LiveData Procedure-Dashboard™ with Active Time Out®

Procedure-Dashboard with Active Time Out automates the procedure safety checklist and seamlessly integrates patient EHR data in the procedure room with automated procedure workflow and patient safety processes. Capture procedural timestamps with a single click of a handheld device to increase accuracy and eliminate double documentation for procedure suite staff.

LiveData Procedure Suite Manager Analytics™

Procedure Suite Manager Analytics transforms real-time operational data from your EHR into actionable quality, compliance, and efficiency insights. Eliminate the need to export, format, and import data from multiple sources. From procedure assessments to discharge, Procedure Suite Manager Analytics provides operational status updates and notifications for each care step.

Working Together For Those Who Serve Our Veterans

Document Storage Systems, Inc. (DSS) is a catalyst for health care innovation and digital transformation, helping the Department of Veterans Affairs as a solutions provider, solutions integrator, and services contractor. DSS is committed to assisting VA in its High Reliability Organization journey and delivering care quality for Veterans by meeting top initiatives, changing regulatory requirements, and implementing enhanced business transformation across VA enterprise.

LiveData develops and deploys surgical workflow solutions for operational efficiency and patient safety. Surgery departments using LiveData PeriOp Manager have documented significant improvements in Key Performance Indicators including block utilization, case scheduling accuracy, first-case-on-time-starts, cancellations, and turnover.
